

# **Fact Sheet Texas Fire Service Needs Assessment**

There has been substantial progress in reducing many fire department needs, although more remains to be done.

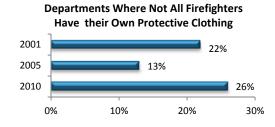

### **Protective Equipment and Clothing**

The 2010 percentage of Texas departments without enough equipment to equip all personnel (or all personnel on a shift, as appropriate) was:

53% for self-contained breathing apparatus (SCBA), compared to 56% in 2001 and 38% in 2005:

Departments Where Not All Firefighters on a Shift Are Equipped with SCBA 2001 56% 2005 38% 2010 53% 0% 20% 40% 60%

26% for personal protective clothing, compared to 22% in 2001 and 13% in 2005; and

45% for personal alert safety system devices (PASS), compared to 60% in 2001 and 39% in 2005;

## **Training**

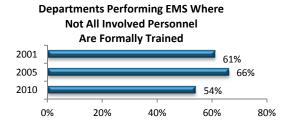

In many fire departments, not all involved personnel have been formally trained in their emergency response duties. The 2010 percentage of Texas departments in which not all involved personnel have been formally trained was:

63% for **structural firefighting**, compared to 71% in 2001 and 76% in 2005; and

**Departments Performing Structural** 

54% for emergency medical service (EMS), compared to 61% in 2001 and 66% in 2005.

#### **Fitness and Health**

In many fire departments, there is no program to maintain basic firefighter fitness and health.

The 2010 percentage of Texas departments with no such program was:

> 68%, compared to 87% in 2001 and 86% in 2005.

# Departments Without a Program to Maintain Basic Firefighter Fitness and Health

# **Unusually Challenging Incidents**

There has been little or no progress in increasing the ability of fire departments to handle **various unusually challenging incidents** with local trained personnel and specialized equipment alone:

- Provide technical rescue and EMS at a structural collapse involving 50 occupants; and
- Provide hazardous material response and EMS at an incident involving chemical or biological agents and with 10 injuries.
- Wildland/urban interface (WUI) fire affecting 500 acres; and
- Mitigation of a major developing flood.

However, there has been progress in the percentage of departments having written agreements for working with others. The 2010 percentage of Texas departments with *no* such written agreement was:

- ➤ 46% for structural collapse, compared to 67% in 2001 and 51% in 2005;
- ➤ 52% for chemical or biological incidents, compared to 72% in 2001 and 48% in 2005;
- ➤ 44% for wildland/urban interface fires, compared to 55% in 2001 and 42% in 2005; and
- ➤ 45% for developing major flood, compared to 77% in 2001 and 60% in 2005.

Success requires more written agreements, with each participating department knowing its role, providing resources needed to play its role, and helping test the plan in simulations and rehearsals.

### **Stations and Apparatus**

Some stations lack specific features, which are required by current standards but were not required when stations were constructed. Some stations are old enough that a variety of persistent or recurring problems are to be expected and replacement might be better and even cheaper. Some departments are using old fire apparatus.

- > 31% of Texas fire departments do not have backup power for their fire stations.
- ➤ 60% of Texas fire departments do not have exhaust emission control for their fire stations.
- > 30% of the fire stations in Texas are over 40 years old.
- > 5% of Texas fire department engines and pumpers are at least 30 years old.

## **Cautions on interpretation**

**Trends**. For some states and most needs assessment survey questions, even large changes from one survey to another will not be statistically significant. Be cautious in interpreting results as trends.

State-to-state comparisons. States where a large share of departments serve small communities will tend to have greater needs according to the measures used here than states where a small share of departments serve small communities. State-to-state comparisons must be viewed with caution, particularly if the states have very different mixes of urban and rural communities.

**How rural is Texas?** The survey for Texas was based on the following responses:

- ➤ 60 of the 120 departments protecting populations of 25,000 or more;
- > 38 of the 169 departments protecting populations of 10,000 to 24,999; and
- > 108 of the 1,199 departments protecting populations of less than 10,000.
